

AUTOMATION WITH WORKFLOWS IN MISP

SHORT VERSION

SAMI MOKADDEM

MISP PROJECT

<https://www.misp-project.org/>

1. Automation in MISP

2. MISP Workflows

- ▶ Fundamentals
- ▶ Demo with examples
- ▶ Using the system
- ▶ How it can be extended

AUTOMATION IN MISP: WHAT ALREADY EXISTS?

MISP API / PyMISP

- Needs CRON Jobs in place
- Potentially heavy for the server
- Not realtime

PubSub channels

- After the actions happen: No feedback to MISP
- Tougher to put in place & to share
- Full integration amounts to develop a new tool

- No way to **prevent** behavior
- Difficult to setup **hooks** to execute callbacks

- **Visual** dataflow programming
- **Drag & Drop** editor
- Flexible **Plug & Play** system
- **Share** workflows, **debug** and **replay**

■ **Notification** on specific actions

- ▶ New events matching criteria
- ▶ New users
- ▶ Automated alerts for high-priority IOCs

■ **Extend** existing MISP behavior

- ▶ Push data to another system
- ▶ Automatic enrichment
- ▶ Sanity check to block publishing / sharing
- ▶ Curation pipelines

■ **Hook** capabilities

- ▶ Assign tasks and notify incident response team members

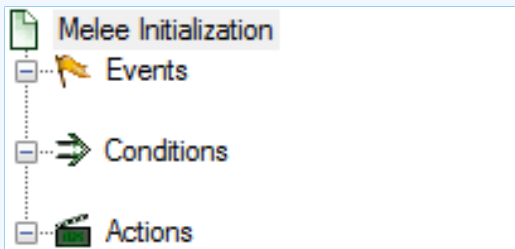

■ ...

WORKFLOW - FUNDAMENTALS

Objective: Start with the foundation to understand the basics

HOW DOES IT WORK

1. An **event** happens in MISP
2. *(optional)* Check if all **conditions** are satisfied
3. Execute all **actions**
 - ▶ May prevent MISP to complete its original event

WHAT KIND OF EVENTS?

Events

- New MISP Event
- Attribute has been saved
- New discussion post
- New user created
- Query against third-party services
- ...

❓ Supported events in MISP are called **Triggers**

❓ A **Trigger** is associated with **1-and-only-1 Workflow**

TRIGGERS CURRENTLY AVAILABLE

Currently 11 triggers can be hooked. 3 being **Blocking**.

Triggers

List the available triggers that can be listened to by workflows.

Missing a trigger? Feel free to open a [Github issue!](#)

[Documentation and concepts](#)

Page 1 of 1, showing 1 records out of 11 total, starting on record 1, ending on 11

WHAT KIND OF CONDITIONS?

⇒ Conditions

- A MISP Event is tagged with `tlp:red`
- The distribution of an Attribute is a sharing group
- The creator organisation is `circl.lu`
- Or any other **generic** conditions

? These are also called **Logic modules**

The screenshot shows a configuration window for a logic module titled "IF :: Distribution". It contains three dropdown menus: "Scope" set to "Distribution of the Event", "Condition" set to "Is", and "Distribution" set to "Community". There are status icons on the right: a checkmark for the condition and a red 'X' for the distribution.

Field	Value	Status
Scope	Distribution of the Event	
Condition	Is	✓
Distribution	Community	✗

WORKFLOW - LOGIC MODULES

■ ➡ **logic** modules: Allow to redirect the execution flow.

- ▶ IF conditions
- ▶ Delay execution

WHAT KIND OF ACTIONS?

Actions

- Send an email notification
- Perform enrichments
- Send a chat message on MS Teams
- Attach a local tag
- ...

? These are also called **Action modules**

The screenshot shows a 'Send Mail' action module. It has a title bar with an envelope icon and the text 'Send Mail', followed by a three-dot menu icon. Below the title bar is a description: 'Allow to send a Mail to a list or recipients'. The main section is titled 'Recipients' and contains a text input field with the value 'All accounts' and a close button (X). Below this is a section titled 'Mail template subject' with a text input field containing 'I'm the mail subject!'. At the bottom is a section titled 'Mail template body' with a text input field containing 'And I'm the body!'. Navigation arrows (left and right) are visible on the sides of the input fields.

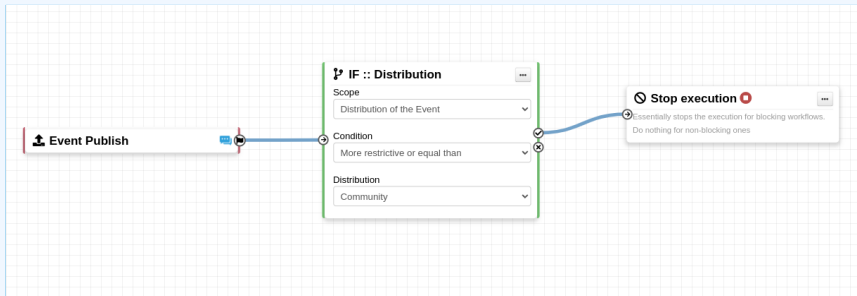

WORKFLOW - ACTION MODULES

-  **action** modules: Allow to executes operations
 - ▶ Tag operations
 - ▶ Send notifications
 - ▶ Webhooks & Custom scripts

All	Action	Logic	misp-module	Custom	Blocking	Enabled	Disabled	Enter value to search	Filter	X

WHAT IS A MISP WORKFLOW?

- Sequence of all nodes to be executed in a specific order
- Workflows can be enabled / disabled
- A Workflow is associated to **1-and-only-1 trigger**

SOURCES OF WORKFLOW MODULES (o)

Currently 36 built-in modules.

- **Trigger** module (11): built-in **only**
 - ▶ Get in touch if you want more
- **Logic** module (10): built-in & **custom**
- **Action** module (20): built-in & **custom**

SOURCES OF WORKFLOW MODULES (1)

■ Built-in **default** modules

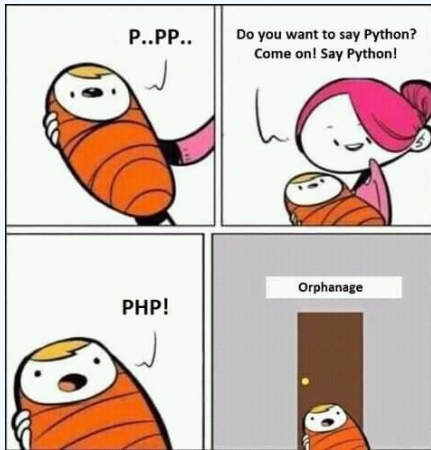

- ▶ Part of the MISP codebase
- ▶ Get in touch if you want us to increase the selection (or merge PR!)

SOURCES OF WORKFLOW MODULES (2)

User-defined **custom** modules

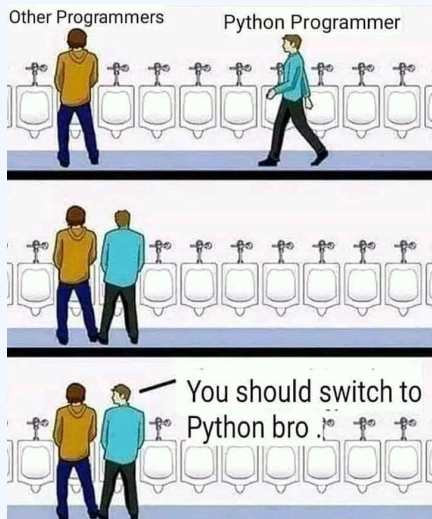

- Written in PHP
- Extend existing modules
- MISP code reuse

SOURCES OF WORKFLOW MODULES (3)

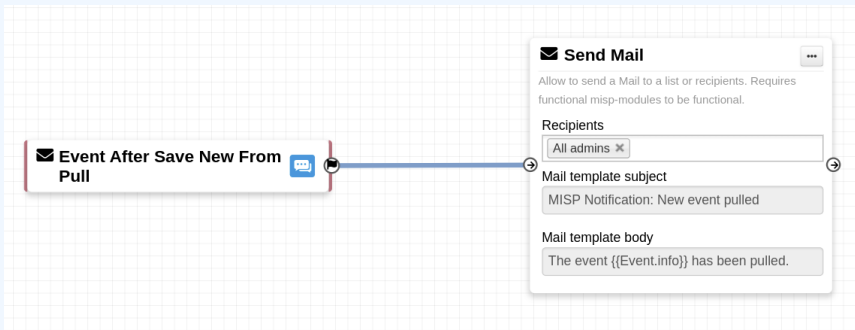

Modules from the **misp-module**  **enrichment service**

- Written in Python
- Can use any python libraries
- Plug & Play

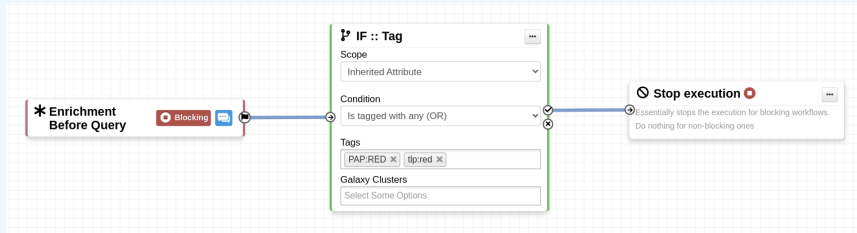

- WF-1. Send an email to **all admins** when a new event has been pulled
- WF-2. Block queries on 3rd party services when **tlp:red** or **PAP:red**
- ▶ **tlp:red**: For the eyes and ears of individual recipients only
 - ▶ **PAP:RED**: Only passive actions that are not detectable from the outside

DEMO WF-1: SEND AN EMAIL TO **ALL ADMINS** WHEN A NEW EVENT HAS BEEN PULLED

DEMO WF-2: BLOCK QUERIES ON 3RD PARTY SERVICES WHEN **TLP:RED** OR **PAP:RED**

- **tlp:red**: For the eyes and ears of individual recipients only
- **PAP:RED**: Only passive actions that are not detectable from the outside

Everything is ready?

Let's see how to build a workflow!

1. Prevent event publication **if tlp:red** tag
 - ▶ Send a mail to `admin@admin.test` about potential data leak
2. **else**, send a notification on Mattermost

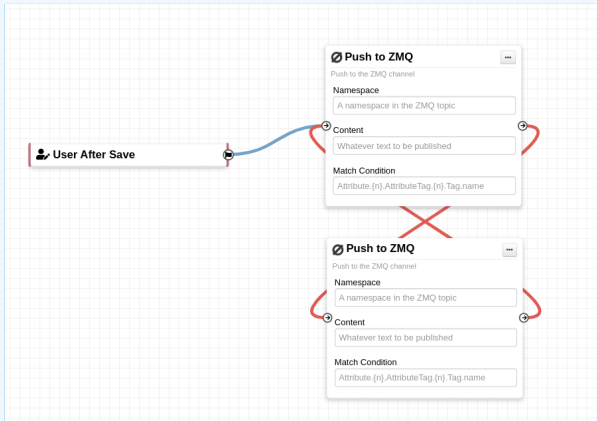

CONSIDERATIONS WHEN WORKING WITH WORKFLOWS

Objective: Overview of some common pitfalls

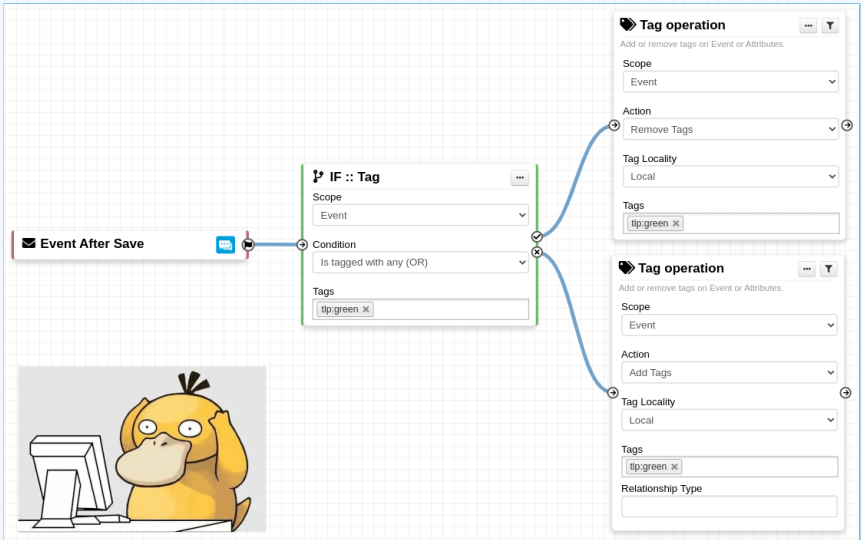

WORKING WITH THE EDITOR - OPERATIONS NOT ALLOWED

Execution loop are not authorized

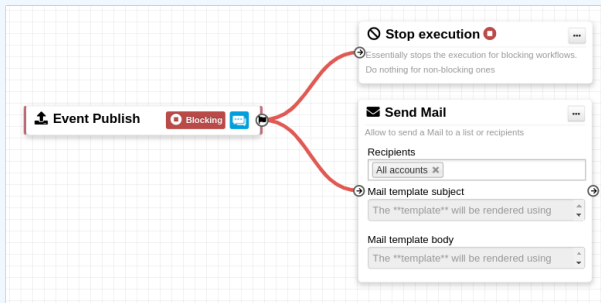

RECURSIVE WORKFLOWS

⚠ **Recursion:** If an action re-run the workflow

WORKING WITH THE EDITOR - OPERATIONS NOT ALLOWED

Multiple connections from the same output

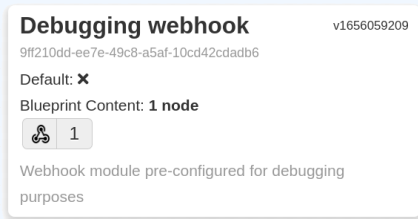

- Execution order not guaranteed
- Confusing for users

ADVANCED USAGE

Objective: Overview of Blueprints, Data format and Filtering

WORKFLOW BLUEPRINTS

1. Blueprints allow to **re-use parts** of a workflow in another one
2. Blueprints can be saved, exported and **shared**

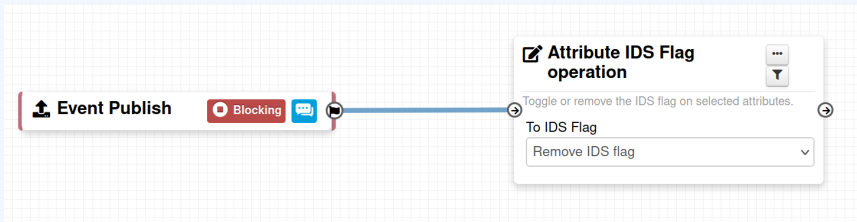

Blueprints sources: MISP/misp-workflow-blueprints repository¹

- Block actions if any attributes have the `PAP:RED` or `tlp:red` tag
- Curation pipeline
- Enrich data from 3rd-party

¹<https://github.com/MISP/misp-workflow-blueprints>

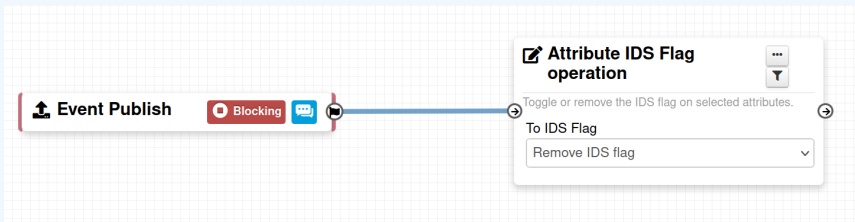

FILTERING DATA ON WHICH TO APPLY A MODULE

What is the outcome of executing this workflow?

FILTERING DATA ON WHICH TO APPLY A MODULE

What is the outcome of executing this workflow?

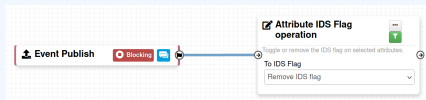

All Attributes get their `to_ids` turned off.

How could we force that action only on Attribute of type comment?

→ Hash path filtering!

FILTERING DATA ON WHICH TO APPLY A MODULE

Node Filtering

Element selector

Event._AttributeFlattened.{n}

Value

comment

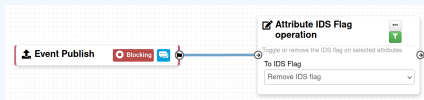

Operator

In

Hash Path

type

FILTERING DATA ON WHICH TO APPLY A MODULE

Node Filtering

Element selector

Event._AttributeFlattened.{n}

Select elements on which to apply the filtering

Value

comment

Fixed value

Operator

In

Comparison operator

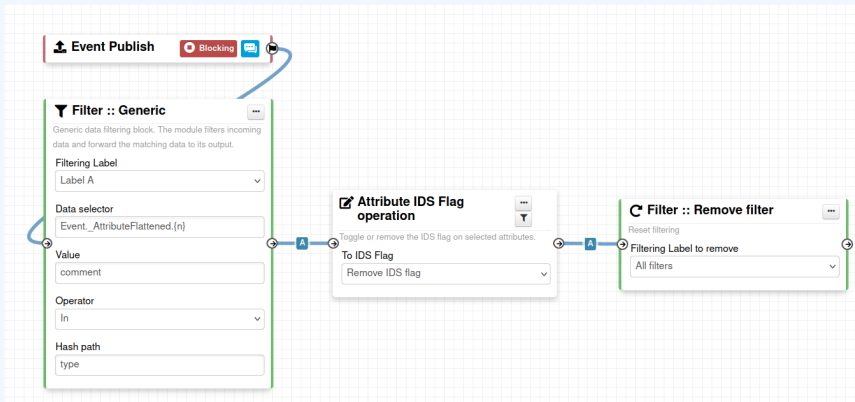

Hash Path

type

Data point to get the value

FILTERING DATA ON WHICH TO APPLY ON MULTIPLE MODULES

New feature as of **v2.4.171** allows setting filters on a path.

SHOULD I MIGRATE TO MISP WORKFLOWS

I have automation in place using the API/ZMQ. Should I move to Workflows?

- I have a curation pipeline using the API, should I port it to workflows?
 - ▶ **No** in general, but WF can be used to start the curation process or perform simple pre-processing
- What if I want to **block** some actions
 - ▶ Put the blocking logic in the WF, keep the remaining outside
- Bottom line is **Keep it simple** for you to maintain

FUTURE WORKS

- More 🎬 modules
- More ➡ modules
- More 🦊 triggers
- Recursion prevention system

FINAL WORDS

- Designed to **quickly** and **cheaply** integrate MISP in CTI pipelines
- **Beta** Feature unlikely to change. But still..
- Waiting for feedback!
 - ▶ New triggers?
 - ▶ New modules?
